

# FUTURE-PROOF YOUR BUSINESS COMMUNICATIONS

CLOUDMADESIMPLE  
TRUSTED IT EXPERTS

A cloud-based phone solution built into the Teams collaboration platform. It's the last phone system your business will ever buy.

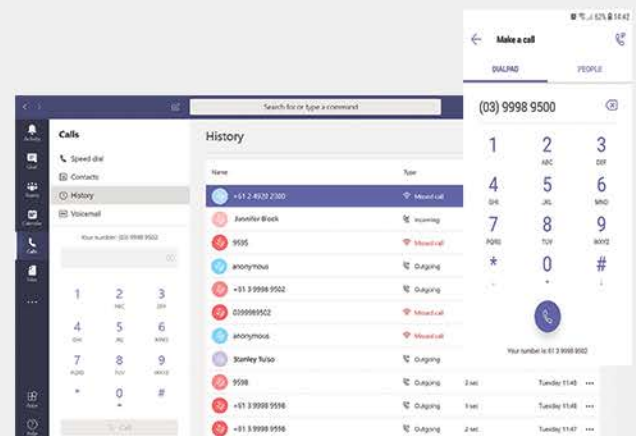

## Microsoft Teams Calling

Integrate your business phone number with MS Teams to make and receive calls directly within the app.

Allow your employees to transition between Microsoft Teams on the go and their office phone at their desk, without missing a beat.

A professional on-call experience with call forwarding, conference calls, auto attendant, call queues, voicemail and hold music.

“Teams Calling has been a revelation to our business. It makes it so easy to do business. Cloud Made Simple made the transition to teams 100% seamless for us. Their team was extremely thorough from start to finish. I would personally recommend to any business.”

Craig Suggate, General Manager

## Save Up To 75% on 1300/1800/0800 Calls\*

A customer had a 1300 bill of \$1,400/month with another provider. With Teams Calling, we cut their bill to \$406 – a \$70% saving. See below for a direct cost comparison sample.

Call Duration (in seconds)	CMS Cost	Other Telco Cost
427	\$0.39	\$1.33
693	\$0.64	\$2.13
64	\$0.06	\$0.24
2	0.00	0.06
1467	\$1.34	\$4.45

\*in comparison to Telco in a Box. Other telco companies may vary.

## Connect How You Want

When you want to make a call in Teams you can use a desk phone, mobile device, headset or your computer. This gives employees the freedom to take calls on their computer while working from home or on a mobile device from the road. No matter which method you use, your business number will display.

## A Centralised Digital Workspace

Calling represents only about a quarter of what you can do in Microsoft Teams. It is a holistic platform that combines communication tools – like chat, video conferencing, and all your files – with features that facilitate work, in-office or remotely.

## How Microsoft Teams Works as a Phone

Calling in Teams works exactly like a traditional phone system. Once you add a calling plan, you'll receive your own Direct Inward Dial (DID) number. You can then make and receive calls on your laptop, headset or traditional phone.

## Communications You Can Rely On

Like other applications in Office 365, Teams is in the cloud. As a result, your phone system isn't reliant on an office or data center connection. If the data center your phone system depends on goes down, Microsoft moves the connection to a different one. Users don't notice the change and calls are not dropped or missed.
